

Profile:

Mid-level software engineer with 4+ years building enterprise-grade applications at Amazon and high growth SaaS companies. Specialised in full-stack development with C#/.NET backend and modern JavaScript frameworks. Proven ability to optimize system performance (30%+ improvements), reduce production incidents (15% reduction), and deliver scalable solutions serving thousands of users.

Strong technical foundation in cloud infrastructure (Azure), database optimization (SQL Server), and secure authentication systems. Experienced in Agile delivery, CI/CD pipelines, and cross-functional collaboration. Seeking opportunities with innovative companies offered Skilled Worker visa sponsorship.

Languages: C#, JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Backend: .NET Core, .NET Framework, ASP.NET, REST APIs, MVC, Blazor, Node.js

Frontend: React, Vue.js, Razor Pages, jQuery, responsive design, Wordpress

Databases: SQL Server (advanced), PostgreSQL, MySQL, MongoDB, query optimization

Cloud & DevOps: Microsoft Azure (App Services, Azure SQL, Azure Functions), CI/CD, Git, Azure DevOps

Security: OAuth, Auth0, multi-factor authentication, RBAC, secure coding practices

Testing: xUnit, NUnit, unit testing, TDD, debugging, performance profiling

Tools: Visual Studio, VS Code, Git, Jira, Postman, SQL Server Management Studio

Methodologies: Agile/Scrum, sprint planning, code reviews, technical documentation

Experience:

Project Management Intern, Amazon, London UK

MAR 2022 – SEP 2022

Operations automation and cloud infrastructure

- **Automated critical workflows** using SQL and PowerShell, eliminating **3+ hours of daily manual work** and improving system performance by **35%**.
- Collaborated with engineering teams on **Azure-hosted backend systems** and authentication services (Auth0), gaining hands-on experience with cloud infrastructure and enterprise-scale applications.
- Built **automated reporting dashboards** using SQL and data visualization tools, delivering real-time operational insights to senior stakeholders and improving decision-making speed.
- Contributed to **Agile delivery workflows**, participating in sprint planning, technical documentation, and cross-team process improvements in a fast-paced, high-standards environment.
- **Key Achievement:** Delivered automation solutions that scaled across multiple teams, demonstrating ability to identify bottlenecks and implement high-impact technical solutions.

Software Developer Sorce, Remote UK

AUG 2022 – PRESENT

Enterprise SaaS platform (desk booking & intranet solutions)

- Develop and maintain **production .NET applications** using C#, SQL Server, and REST APIs, serving **thousands of enterprise users** across multiple SaaS products with 99.9% uptime.
- **Optimized database performance by 30%** through query refactoring, strategic indexing, and stored procedure design, handling **millions of records** with sub-second response times.
- Built **enterprise security features** including multi-factor authentication, Microsoft Teams SSO integration, and role-based access control, ensuring compliance with security standards.
- **Reduced production incidents by 15%** through systematic debugging, comprehensive unit testing (xUnit), rigorous code reviews, and root cause analysis.
- Developed **high-performance search functionality** and interactive UI components using Blazor and JavaScript, efficiently processing large datasets for real-time user interactions.

- Collaborated in **Agile teams** using Azure DevOps and Jira, participating in sprint planning, peer code reviews, and cross-functional feature delivery.
- **Key Achievement:** Led performance optimization initiative that improved query response times from 3-4 seconds to sub-second, directly impacting user satisfaction scores

Freelance Web Developer

SEP 2024 – PRESENT

Pilates Studio

- Manage and maintain the studio's WordPress website, ensuring smooth performance, regular updates, and security.
- Implement design and content updates to support new classes, offers, and client engagement.
- Monitor site analytics and uptime to improve user experience and SEO visibility.

Education and Qualifications

Brunel University London (Bsc (Hons) Computer Science: Software Engineering, 2:1

- Final-Year Project: Designed and built microservices-based university jobs platform with focus on scalability, performance optimization, and distributed systems architecture.
- **Relevant Coursework:** Distributed Systems, Database Systems, Software Engineering, Cloud Computing, Web Application Development

Currently pursuing Oracle Cloud Infrastructure Foundations Associate + additional Oracle Cloud certifications. Udemy Bootcamps: SQL, Java 17, Web Development, Python.

Certifications & Professional Development

Oracle Cloud Infrastructure Foundations Associate (in progress).

Udemy Professional Development: Advanced SQL, Java 17, Full-Stack Web Development, Python.

Self-Directed Learning: Kubernetes fundamentals, Docker containerization, Terraform IaC, Linux system administration, React ecosystem.

Additional Information

Visa Status: Require Skilled Worker visa sponsorship (currently holding UK Skilled Worker visa).

Work Authorization: Familiar with UK visa process, available to start within standard visa processing timelines -

Location: Open to relocation.

Availability: Immediate.
